Gable - Wikipedia A gable is the generally triangular portion of a wall between the edges of intersecting roof pitches. The shape of the gable and how it is detailed depends on the structural system used, which reflects climate, material availability, and aesthetic concerns. Green roof - Wikipedia The main disadvantage of green roofs is that the initial cost of installing a green roof can be double that of a normal roof. Depending on what kind of green roof it is, the maintenance costs could be higher, but some types of green roof have little or no ongoing cost. Energy Efficient Windows :: Healthy Heating Infiltration Windows Walls and slabs Roofs. Facts about radiant energy, windows and comfort. The biggest radiator known to man is the sun and the biggest absorber of radiant energy is the one we walk on everyday - its called earth - and earth cools itself every night with radiant energy.

Extensive Vegetative Roofs | WBDG Whole Building Design Guide Vegetative roofs are divided into two categories: 1) extensive vegetative roofs, which are 6 inches or shallower and are frequently designed to satisfy specific engineering and performance goals, and 2) intensive vegetative roofs, which may become quite deep and merge into more familiar on-structure plaza landscapes with promenades, lawn, large. Insulating Low-Slope Residential Roofs - GreenBuildingAdvisor Rigid foam insulation can be installed on top of the roof deck. Most low-slope commercial roofs are insulated above the sheathing, not below the sheathing. Getting Insulation Out of Your Walls and Ceilings ... Musings of an Energy Nerd Getting Insulation Out of Your Walls and Ceilings The PERSIST technique puts insulation where it belongs.

2018 Roofing Cost Estimator | Cost of Metal Roofs vs Shingles Roofs perform such an essential function that "keeping a roof over your head" is synonymous with shelter. They keep moisture from destroying your home and protect the interior from inclement climate conditions. Keeping The Heat In - Chapter 7: Insulating Walls ... Types of wall construction. There are three main types of wall construction used in Canadian houses. i) Solid walls. Solid walls â€œ built of brick, stone, concrete block, log or wood plank â€œ do not have a cavity that can be insulated. The Perfect Wall | Building Science Corporation The perfect wall is an environmental separator it keeps the outside out and the inside in. The wall assembly can control rain, air, vapor and heat.

Information Search | BSC | Building Performance This report analyzes the performance of walls clad with HardiePlank fiber cement siding and compares them to traditional stucco assemblies. The data presented is a subset of experimental data from a multi-phase, multi-year research project at the Vancouver Field Exposure Test Facility led by Building Science Corporation (BSC) and Gauvin 2000.
